In accordance with our meeting held on March 1, 1982, it was agreed that your office will conduct tests to determine if there is asbestos content in the air during the time there is a tenant alteration being performed on the 23rd floor of Tower A. You will take samples within the breathing range of a workman in the room adjacent to and another remote from the immediate work area and possibly additional samples outside the work site.

The Tenant Alteration is for Philips Information Systems, room number 2327 and includes sprinkler work. The TAA approval is anticipated to be signed the week of 3/8/82 and work is to start soon thereafter.

Samples shall be taken prior, during and after the contractor has performed his sprinkler work.

All staff time for this work shall be charged to Code No. CW2-770.526.

Should you have any further questions or plan to visit the project site, please contact Mr. N. Napolitano on extension 4152.

James G. Carlock
